MEBO[®]
natural ointments

MEBO's proven expertise

The MEBO company specialises in the science of burns, wounds, and ulcers.

Our global reputation for scientific innovation began with Moist Exposed Burn Ointment (MEBO), now marketed in Australasia as **MEBO burn repair**.

This ointment has proven success in aiding the body's natural healing of burns – assisting recovery rates significantly.

MEBO products are so effective because they provide a healthy environment to promote stem cell regeneration; this assists in natural healing and helps to minimise scarring.

Research has shown the skin's natural healing process is significantly supported using MEBO ointment.

Currently over 5,000 hospitals use **MEBO burn repair**.

MEBO ointments have been awarded 20 international patents including in the USA, Europe, and Japan.

MEBO ointments

All MEBO ointments are developed to create an environment where skin can recover naturally.

MEBO burn repair works

- By helping to cool the affected area
- By helping the body's own immune defences
- By moisturising and protecting the area
- By encouraging stem cell regeneration for the growth of new skin
- By helping to minimise scarring

MEBO wound repair works

- By helping the body's own immune defences
- By assisting the affected area to liquefy dead tissue
- By encouraging stem cell regeneration for the growth of new skin
- By helping to minimise scarring

MEBO skin restore works

- By promoting the natural recovery of scarred or blemished skin
- By assisting in reducing skin cracking
- By soothing the skin
- By assisting in the natural repair and regeneration of new skin at a cellular level

MEBO acne clear works

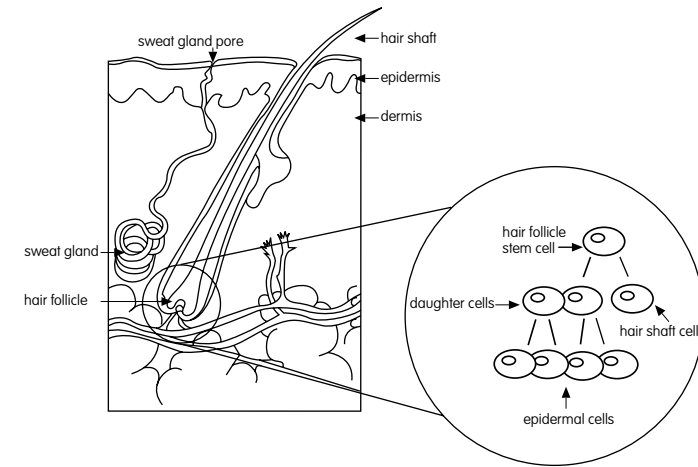

- By helping the body's own immune defences
- By helping to cleanse and protect dry, chafed, or infected skin
- By helping the affected skin to recover

MEBO anti itch works

- By assisting the natural repair of cracked or chafed skin
- By aiding the natural repair of nerve endings in the skin tissue

How MEBO ointments work

Stimulating Stem Cell Regeneration

MEBO's unique formulations stimulate stem cell regeneration.

The ointments promote the natural regeneration of stem cells located at the bottom of the hair follicle. These cells are capable of producing not only the hair shaft but also the daughter cells that create the dermis and epidermis.

MEBO's international head office is based in Los Angeles, California in the United States.

MEBO burn repair and **MEBO skin restore** are the only ointments officially endorsed by the New Zealand Burn Support Charitable Trust Incorporated.

Officially endorsed by the New Zealand Burn Support Charitable Trust, INC.
